Hi Deldi,

I agree – it did go well. Sophia's response helps and if others find anything to comment on, that would be welcome too. Thank you much!

On the sampling aspect, here is a summary that I have pulled from various presentations:

Phase 1 -

- Initial Assessment Areas included 219 properties, identified as most likely to be impacted based on air modelling by SCAQMD
- DTSC ordered Exide to sample and cleanup these properties
- This was done by Exide and their contractors with DTSC oversight

Status as of today –

219 properties total

195 properties Sampled as they signed Access Agreements for Sampling

186 properties Cleaned up as they signed Access Agreements for Cleanup

24 properties remain non-responsive after repeated efforts [outreach is continuing]

6 properties denied access for cleanup after they had been sampled

3 do not require cleanup

Phase 2 -

- Expanded Areas included 146 properties, sampled on a grid

- This step out sampling was done to identify extent of Exide's contamination
- DTSC ordered Exide to sample additional properties beyond the initial Assessment Areas
- This was done by Exide and their contractors with DTSC oversight

Status as of today –

146 properties total

146 properties Sampled as they signed Access Agreements for Sampling

41 properties identified as Priority 1* property

*Priority 1 =

- Any one sample with concentration of lead in soil >1000 ppm in the top 0-1" or 1-3" layer OR
- 2 sample locations with concentration of lead in soil >1000 ppm at any depth

EXIDE claims their contamination only goes up to 1500' surrounding their facility; which is all of the surrounding industrial area and none of the residential areas.

Phase 3 -

- Preliminary Area Of Investigation – estimated to be 1.7 miles away from the facility
- This is a preliminary estimate based on statistical analysis and metals ratio analysis done by DTSC
- This area includes approximately 10,000 properties
- Administration has allocated \$ 7 M for this fiscal year [FY 15/16] to get additional sampling and cleanup started in this area

Status as of today –

180 properties with signed Access Agreements for Sampling

18 properties sampled as of today

41 properties identified as Priority 1 property from sampling done in phase 2

9 properties with signed Access Agreements for Cleanup

4 properties scheduled for cleanup

Cleanup starting 12/3/15

A bit lengthy but trying to make it clear. Please do not hesitate to call if you have questions.

Hope this helps

Subject: request

Su, I thought the meeting last night went pretty well, I'm glad Sophia was able to respond re the sampling plan. Hopefully that will be sufficient.

On another matter, I'm hoping you might have some readily available summary of the sampling data that would describe the universe of the sampling findings. I recall that Barbara last night said that to date, 39 properties had been identified as priority 1. Is that correct? The reason I ask is that I'd like to give my managers here an update on this. If it's easier to point me to a doc on your website, that's great.

Thanks Su!

Deldi
